

## **Course Outline**

### **Introduction to Machine Learning for Economists**

Course Lecturer: Sonan Memon

IBA Karachi

Duration: December 4-10, 2020

## **Course Basics**

This is a mini course on machine learning for graduate students. The objective is to introduce students to machine learning methods and standard references in this literature, providing them with a launching pad, from which they can continue learning much more on their own.

Course is scheduled in venue TBA during Dec 4-10, 2020. The total number of lectures is 4. Each lecture will last for 2 hours.

Only a few, selected topics can be covered due to the non-trivial nature of content and limitations on time. See below for full list of topics to be covered.

There will be occasional, hands on applications in R to illustrate the ideas in lectures, but I will focus more on concepts and less on algorithm design/computational implementation. This is because the latter requires a lot of time, is better suited to self-learning since the nature of code needed can vary dramatically by application and design of ML algorithms does not lie in the expertise of economists.

## **Course Prerequisites**

The course prerequisite is familiarity with at least advanced undergraduate econometrics, since we will draw parallels from econometrics and discuss the connection between the two fields.

Basic fluency with R programming is also highly useful and recommended.

Freshmen and Sophomores are discouraged to attend, unless special consent is received from the instructor. Advanced undergraduates (Juniors/Seniors) who have studied econometrics can attend. Masters and PhD students are the main target audience. Of course, all faculty of economics department is also welcome. Those who do not belong to economics department, either as students or faculty need to request for special consent from instructor. We do not want enrollment to exceed 30.

## Relevant Contact Persons

- Main: Sonan Memon (+923332764571 & [smemon@iba.edu.pk](mailto:smemon@iba.edu.pk))
- Ahmed Ali, Admin Economics Department
- Dr. Asma Hyder

## **Course Content**

### **Lecture 1: Introduction to ML and Shrinkage Estimators**

1. Basic Decision Theory, Loss Functions, Integrated Risk, Bayes' Risk, Bayes' Optimality, Empirical Risk Minimization, Minimax.
2. Basic Concepts of Machine Learning: Training Sample, Validation Sample, Cross Validation, Variance Bias Trade off.
3. Regularization and Shrinkage Estimators: Ridge Regression, Stein's Unbiased Risk Estimate (SURE), LASSO, Tuning Shrinkage/Regularization Parameters.
4. Discussion of LASSO application if time permits: Big Data Application from Stock and Watson Data Set.

### **Lecture 1 Readings/Other Resources**

- Robert, C. (2007). The Bayesian choice: from decision-theoretic foundations to computational implementation. Springer Verlag, chapter 2.

- Alpaydin, Ethem (2010), Introduction to Machine Learning, 2nd edition, MIT Press.
- Stachurski, John (2016), A Primer in Econometric Theory, MIT Press (Chapter 14).

## **Lecture 2: Multi Armed Bandits**

1. Multi-Armed Bandit Problems.
2. Thompson Sampling.
3. Application: Cario, Gordon, Kasy et al (2020), Adaptive Treatment Assignment example in Syrian refugee context.

## **Lecture 2 Readings/Other Resources**

- Application: Cario, Stefano, Gordon, Grant, Kasy, Maximilian et al (2020), An Adaptive Targeted Field Experiment: Job Search Assistance for Refugees in Jordan

## **Lecture 3: Deep Neural Networks**

1. Deep Neural Networks.
2. Gradient Descent.
3. Stochastic Gradient Descent.
4. Back Propagation.
5. Economic Application.

## **Lecture 3 Readings/Other Resources**

- Goodfellow, I., Bengio, Y., and Courville, A. (2016). Deep learning, MIT Press, chapters 6-8

- Brief Discussion of Application: Solving High Dimensional Dynamic Programming Problems Using Neural Nets in Heterogeneous Agent Models in Macroeconomics (Professor Jesus Fernandez Villaverde, UPenn)

## **Lecture 4: Text as Data**

1. Computational Linguistics: Analysis of Text Corpora.
2. Unsupervised Learning: Latent Dirichlet Allocation and Topic Modeling.
3. Economic Example: Linguistic Analysis of Monetary Policy Announcements and FOMC meeting minutes, Hansen et al (2018) QJE, News Driven Inflation Expectations (2020 Norges Bank Working Paper).
